

BRIGHTEN UP YOUR DARK PHOTOS WITH AKVIS ENHANCER 15

Improved Detail Revealing Process

August 18, 2015 — AKVIS announces the release of AKVIS Enhancer 15.0 for Windows and Mac OS X. The program offers a fast method to fix dark pictures, increase contrast and brightness, adjust tones. The new version provides superior image processing for "Improve Detail" mode and other changes.

AKVIS Enhancer is image enhancement software which operates in 3 modes: **Improve Detail**, **Prepress**, and **Tone Correction**. Enhancer detects detail in underexposed, overexposed and mid tone areas of a photo with uneven exposure. It offers an individual approach to every part of the image.

This update brings new functionality, significant improvements and optimizations.

In Version 15:

- **Improved Detail Revealing Algorithm**

Fundamentally revised and reworked **Improve Detail** mode in **AKVIS Enhancer**. In this mode, the program brings out details in an image in both shadows and highlights. It is a powerful feature for strengthening detail in pictures and lightening dark photos.

Now the **Improve Detail** mode has become even stronger and more efficient. It is the best and indispensable tool to perfect your images! It lets you enhance the image quality, correct the bad lighting, the lack of sharpness, and other problems.

Besides the improved image processing, the new version copes with unwanted noise and halo appearing in previous versions when increasing the level of detail.

- **New Presets in Improve Detail mode**

The new version includes an updated list of the ready to use presets created with the improved algorithm.

- **Importing/Exporting User Presets**

It's now possible to import and export presets of all three modes. This feature can be used for backup and sharing user's favorite settings.

- **New Print Options**

It's now possible to print high resolution images on multiple pages.

- **Also in the new version:**

Fixed minor bugs and some compatibility problems, added support for more RAW files, new dark interface style, and other changes.

Existing Enhancer users may check which versions they can update to for free in their account in the [Customer Room](#). Users, whose license is not valid for v.15, can get the latest version for only \$14.95.
