

Instant watercolor: Give your photos a painted appearance with AKVIS Watercolor 1.0

by [Jeremy Gray](#)

posted Tuesday, December 6, 2016 at 12:00 PM EDT

If you want to turn your photographs into beautiful watercolor (also known as aquarelle) paintings, software developer AKVIS has the program for you. The company has released [AKVIS Watercolor 1.0](#) for both MacOS and Windows which will quickly make your photos look like paintings.

The software, available as a standalone application or Photoshop plug-in, is designed to be easy to use. You simply select your desired settings and then run the processing. You can select from a range of painting genres and styles, including styles well-suited for landscapes or portraits. You can select different presets for the painting style and paper color, although you can also make in-depth selections to sliders such as stroke thickness, dispersion, stroke density and much more.

To learn more about AKVIS Watercolor 1.0, check out the overview video below. You can [download a free trial of the software here](#). The full licensed software is available for just under \$50.
