

## AKVIS SMARTMASK 6.0: COMPLEX SELECTIONS MADE EASY!

December 24, 2014 — AKVIS announces the release of AKVIS SmartMask V.6.0 for Windows and Mac OS X. The software turns a time-consuming task of selecting a specific area of an image into a simple and fun process. The new version fixes bugs and adds more flexibility.

**AKVIS SmartMask** has been updated to version 6.0!

The software is available as a *standalone* program and as *plugin* for Photoshop and other image editors, for Windows and Mac OS X.

**AKVIS SmartMask** provides powerful tools which let you quickly select a part of an image and remove a background. The program works equally well with soft and sharp edges. With a few mouse clicks SmartMask lets you select fluff, hair, fur, tree branches, glass, or a transparent veil.

The software makes even a difficult selection as easy as pie! You will be freed from boring work and will have more room for creativity and realization of your ideas.

The new version brings some improvements which allow more flexibility when using the program.

### In Version 6.0:

- Added the possibility to drag the splitter between the before and after states (*Original* and *Processing* tabs).
- Added *Dropbox* to the list of the publishing services.
- Added the new dark interface theme. It's possible to switch between the styles in the program preferences.
- Fixed some bugs and interface glitches.
- Extended the list of supported RAW files.
- Added official support for the new Mac OS X 10.10 Yosemite.

Registered users of SmartMask can upgrade to the new version for free.
