This is probably the most stunning piece of software I have reviewed. I say that because of the sheer simplicity of its' operation and the superb results it produces.

You simply use the selection tool in your image editor to select all the marks/blemishes etc. in your photo and then activate AKVIS Retoucher. The result is a blemish free photo. There are no settings to make, just do your selections and click, absolutely brilliant. Absolutely anyone could use it.

This is a "must have" for any one who has photos on their PC.
